

# HOGCHOKER

Up to 9"

Caudal (Tail) Fin

Dorsal Fin

Gill Plate

Lateral Line

Anal and Ventral Fins (continuous)

COOL FACT: The hogchoker starts its life swimming like any other fish, then becomes a flatfish over the course of its first year. During this process, one eye migrates across its body until both eyes are located on the same side of its face!

COOL FACT: Hogchokers do not have Pectoral Fins.
